

“WORTHY OF A CLOSE LOOK”

“The GTI 2500 is versatile enough to be used for virtually any type of treasure hunting by veteran and novice alike. One of the goals Charles Garret has always instructed his staff to strive for is performance combined with ease of operation. He has been quoted as saying “a detector should not require complex programming in order to find treasure” and the GTI 2500 is no exception...

“The *GTI 2500* is truly a professional-quality detector that offers above average performance while not requiring complicated adjustments that would “scare off” less-seasoned detectorists. Even a novice with a few hours of practice can search hunted-out sites with confidence and recover targets that others have missed. While the overall size of the control housing is larger than the GTA series or the smaller brother of the 2500 — the *GTI 1500*, it is well balanced and can be used for extended periods of time without fatigue. With the features unique to the Garrett line and the easy-to-use notch circuitry as well as a true All-Metal mode and improved circuitry, the *GTI 2500* is a detector that can be used successfully in a wide range of applications ranging from coin, beach and relic hunting to electronic prospecting and cache hunting. The overall performance of the *GTI 2500* has been enhanced and the increased detection depth in even the most adverse ground conditions make it worthy of a close look before you purchasing any new detector.”
