

INFINIUM™ Land & Sea

“SIMPLICITY AT ITS FINEST”

“With only 3 dials, this detector offers simplicity at its finest. It is so easy to use that anyone with a bit of detecting experience can become proficient in its operation within a matter of hours...

“One of the things I liked most about the machine was its’ ease of operation. There are no bells & whistles or blinking lights here, just straight forward, easy-to-use controls.. Its’ ability to cope with noisy ground was also rather impressive. The API technology, coupled with the DD coil, eliminated the burden of constant re-ground balancing, even in the harshly mineralized conditions of the second test location...Because this machine is completely waterproof, it can be used in places where other detectors cannot...Of course its’ selling price is another huge bonus. With an MSRP of only \$1,250, the *Infinium* is one of the most affordable PI machines currently on the market...

“What I can tell you is that the development of such an advanced detector by any company is truly a monumental achievement. Its’ ability to cut through mineralization, its’ ease of operation, and incredible price all stack up to make the *Infinium* a serious contender. If you are thinking of breaking into the exciting world of PI machines, I would suggest giving this detector consideration before making a purchase, as it is undoubtedly Garrett’s finest gold machine ever.”
